

Working Student Backend (m/f)

About the job:

- you will help us with the technical conception, implementation, testing and software delivery for our backend services and APIs
- you will help us translate business requirements into technical solutions
- you will help us with the implementation of new features, maintenance and permanent improvement of the code base

What you will bring to the team:

- you are enrolled as master student in computer science, software engineering or equivalent
- you have some practical experience of software design and software development
- you have some practical experience in Java 8, Spring, RESTful APIs and Oracle/PostgreSQL
- you are experienced with comprehensive automated testing
- you are able to adopt and understand new technologies and utilise them efficiently
- you have some knowledge in data structures, algorithms and software design

Why join us?

- we work in a small, autonomous team with high degree of creative freedom
- we have an open company culture with talented and inspiring colleagues
- we are located in the heart of Europe's most creative city with a low cost of living and high quality of life
- we provide every team member a budget to attend conferences and trainings
- we start the day with a smoothie :D
