

Working Student DevOps (m/f)

About the job

- you will support the team with the conceptual design, planning and implementation of solutions to set up and improve the availability and scaling of our platform
- you will support us with the installation, system maintenance, supervision and maintenance of our cloud services
- you will support us with the capacity planning and infrastructure in order to ensure the growth of our platform
- you will support the improvement process of hard- and software, from planning to implementation

What you will bring to the team:

- you have first experience working with databases (installation, configuration and error diagnostics), preferably with Oracle or PostgreSQL
- you have some practical experience with administrative tasks
- you have experience with Linux/ Unix-Administrator
- you have knowledge of best practices and IT operations in an 24/7 service
- you ideally have knowledge of cloud technologies and products (e.g. Amazon AWS or Microsoft Azure)
- you ideally have knowledge of provisioning tools (Chef, Puppet, Ansible)

Why join us ?

- we work in a small, autonomous team with a high degree of creative freedom
- we have an open company culture with talented and inspiring colleagues
- we are located in the heart of Europe's most creative city with low cost of living and high quality of life
- we provide each team member the possibility and support to attend conferences and training courses
- we start each day with a smoothie :D
