

## Working Student Quality Assurance (m/f)

### About the job

- you will support us with the implementation of quality assurance strategies ( test frames and test specification)
- you will support us with the coordination and conducting of tests
- you will support us with the administration and improvement of the test environment
- you will support us with testing (standardization, optimization, documentation)
- you will support us with the documentation, implementation ( manual and automatic) and debugging of test cases
- you will support us with the implementation and review of automatic interface tests

### What you will bring to the team:

- you are enrolled as student in computer science, software engineering or equivalent
- you have some practical experience with web development, quality assurance and ideally software engineering
- you are a well structured, solution-oriented individual and have strong analytical skills
- you have a desire to learn
- you have knowledge of using test frameworks

### Why join us ?

- we work in a small, autonomous team with a high degree of creative freedom
- we have an open company culture with talented and inspiring colleagues
- we are located in the heart of Europe's most creative city with low cost of living and high quality of life
- we provide each team member the possibility and support to attend conferences and training courses
- we start each day with a Smoothie :D
